

BOT 406

Cytology and Genetics

Unit I. Chromatin organization:

- i. Chromosome structure and packaging of DNA.
- ii. Nucleosome organization, DNA Structure (A, B and Z forms)
- iii. Organization of centromere and telomere.
- iv. Karyotype analysis and the banding patterns.
- v. Special types of chromosomes- Polytene, Lampbrush, B-chromosome and sex chromosomes.
- vi. Molecular basis of chromosome pairing.

Unit II. Structural and Numerical alterations in chromosomes:

- i. The origin, meiosis and breeding behaviour of duplication, deficiency, inversion, translocation heterozygotes, haploids, aneuploids and autopolyploids.
- ii. The allopolyploids and evolution of major crop plants.

Unit III. Mutation:

- i. Spontaneous and induced mutations.
- ii. Physical and chemical mutagens.
- iii. Molecular basis of gene mutations.
- iv. Transposable elements and mutation induced by transposons.
- v. Site directed mutagenesis.

Unit IV. DNA damage and repair mechanism.

- i. DNA damage and repair mechanism.
- ii. Initiation of cancer at cellular level. Proto-oncogenes and oncogenes.

Unit V. Cytogenetics of aneuploids and structural heterozygotes:

- i. Effect of aneuploids on plant phenotypes.
- ii. The use of monosomics and trisomics in chromosome mapping of diploid and polyploid species.
- iii. The breeding behavior and genetics of structural heterozygotes.
- iv. The complex translocation heterozygotes.
- v. Robertsonian translocation.
- vi. B-A translocation.

Unit VI. Genetics of prokaryotic and eukaryotic organelles:

- i. **Phage and Bacterial Genetics** —mapping of the bacteriophage genome, genetic recombination in phage, transformation, transduction and conjugation in bacteria
- ii. Genetics of mitochondria and chloroplast, cytoplasmic male sterility.
- iii. Gene fine structure. Cis-trans test, introns and their significance, RNA splicing.

- iv. Regulation of gene expression in prokaryotes and eukaryotes.

Practical Based on 406

1. Induction of polyploidy in plants using colchicine. Different methods of application of colchicine.
2. Isolation of biochemical mutants following physical and chemical mutagenic
3. Isolation of chlorophyll mutants following physical and chemical mutagenic treatments.
4. Isolation of morphological mutants following physical and chemical mutagenic treatments.
5. Karyotype analysis in any two plant species.
6. Meiosis of complex translocation heterozygotes.
7. Meiotic behaviour of monosomy in plants & its effect.
8. Meiotic behaviour of trisomy in plants and its effect.
9. Mitotic/ meiotic chromosomal behaviour in mutagen treated materials.
10. Orcein and Feulgen staining of the polytene chromosomes of *Chironomus*.
11. Study of chromosome pairing and disjunction in translocation heterozygote.
12. Utilization of banding technique for identification of chromosomes in karyotype.

BOT 407

Plant Development & Reproduction

Plant Development

- Unit I.** **i. Meristems:** Organization of shoot and root apical meristem, various theories, Cytological and Molecular analysis of SAM, control of tissue differentiation especially Xylem and Phloem.
- ii. Tissue systems:** Differentiation and functions of different tissue systems such as epidermis, parenchyma, chlorenchyma, sclerenchyma, laticifers and glands.
- Unit II.** **i. Vascular tissues:** Origin, structure and functions Xylem and Phloem elements and their taxonomic significance, Wood development in relation to Environment.
- Unit III.** **i. Leaf:** Growth and differentiation, differentiation of epidermis (with special reference to stomata and trichomes) and mesophyll.
- ii. Root:** Initiation and development; lateral roots, root hair, root microbe Interaction.

Plant Reproduction

- Unit IV.** **i. Flower:** Structure and development
- ii. Pollination:** Types of pollination, attractions and rewards of pollination, pollination mechanism and vectors, breeding systems, structure of pistil, pollen interaction and fertilization.
- Unit V.** **i. Male gametophyte:** Structure of anthers, micro-sporogenesis, role of tapetum, male sterility, pollen germination, pollen tube growth and development, pollen storage, pollen allergy, pollen embryos.
- ii. Female gametophyte:** Ovule development, megasporogenesis, organization of the embryo sac. Structure of the embryo sac.
- Unit VI.** **i. Seed development and fruit growth:** Double fertilization, Endosperm development, Embryogenesis, Ultra-structure and nuclear cytology; Development of dicot and monocot embryos, poly-embryony, apomixes, embryo culture.

Practicals Based on BOT-407

1. Dermatology - trichomes and stomata and leaf anatomy of *Nerium*, *Terminalia* etc.
2. Mechanical tissues (Collenchyma, Sclerenchyma, Stone cells and Xylem) , Secretary tissues (Mucilage Canals, Resin canals, Nectaries, and oil glands), laticifers (Latex cells and Vessels).
3. Vascular tissues and its constituents by sections and maceration, wood anatomy, TS, TLS and RLS
4. Abnormal secondary growth in *Dracaena*, *Bignonia*, *Aristolochia*, *Achyranthus*, *Nyctanthus*, *Salvadora*, *Beta*, *Mirabilis*, *Tinospora*.
5. Study of microsporogenesis and gametogenesis in sections of anthers.
6. Examination of modes of anther dehiscence and collection of pollen grains for
7. Microscopic examination (maize, grasses, *Crotolaria*, *Tradescantia*, *Brassica*, *Petunia*, *Solanum* etc.)
8. Test for pollen viability using stains and *in vitro* pollen germination using hanging drop and sitting drop cultures, suspension culture and surface culture.
9. Estimation of percentage and average pollen tube length *in vitro*
10. Pollen storage, pollen pistil interaction, *in vitro* pollination.
11. Study of ovules and embryo sacs.
12. Field study of types of flowers and pollination mechanism. .
13. Study of nuclear and cellular endosperms.

BOT 408

Biotechnology

- Unit I. Biotechnology:** Basic concept, Historical, principles of tissue culture, Cellular totipotency, Discoveries of Plant Growth hormones in brief review, Contribution of Sir Gottlieb Haberlandt, Development of Tissue culture as a technique, Scope and Importance.
- Unit II. Introduction to tissue culture:** Tissue culture laboratory, Equipment's in Tissue culture laboratory, Preparation of Media, Media composition, Plant Growth Regulators and their Role, selection of media for specified applications, Selection of explant, Sterilization, Sterilizing agents, initiation of tissue culture
- Unit III. Cellular totipotency:** Media for initiation of callus, dynamics of callus growth, measurement of growth, organogenesis and factors controlling it, genome instability in reaction to morphogenesis, somaclonal variation and its applications.
- Unit IV. Cell and organ culture:** Plant organ culture; shoot tip, shoot apical meristem, root, leaf, flower and ovary culture, embryo rescue, factors influencing embryogenesis, suspension culture in stationary and stirred tank reactors, isolation of single cells and their culture, measurement of growth,
- Unit V. Practical approaches of single cell culture:** Somatic embryogenesis, protoplast isolation, regeneration of protoplasts and protoplasts fusion, Synthetic seeds, generation of cybrid and hybrids, cryopreservation of plant cells.
- Unit VI. Applications of tissue culture:** Applications in agriculture and Horticulture, Application in Forestry, Application of Tissue culture in pharmaceutical industry. *In situ* and *ex-situ* conservation. *In vitro* mutagenesis and its application. Production of transgenic plants
- Unit VII. Recombinant DNA technology:** Gene cloning, Vectors, Role of *Agrobacterium*, Gene cloning techniques - Gene gun, Electroporation, Microinjection, Liposome mediated gene transfer, Ultra sonication and Pollen Mediated gene transfer.

Practicals based on 408

1. Equipment's required in Tissue culture Lab
2. Media preparation
3. Sterilization of media
4. Sterilization of explant.
5. Explant Culture.
6. Anther culture
7. Pollen culture,
8. Micropropagation.
9. Embryo rescue technique.
10. Somaclonal variation.
11. *In vitro* mutation.
12. Isolation of plant protoplasts and viability testing.
13. Protoplast fusion by PEG.
14. Tissue culture of Horticultural plant Banana.
15. Tissue culture of Medicinal plant.

BOT 409

Plant Physiology and Metabolism

- Unit I. Plant water relations:** Water Potential, Absorption and Transpiration, Stomatal Physiology, Active and passive transport of solutes, Phloem loading and unloading, source-sink relationship, Physiology of plants under water stress.
- Unit II. Enzyme:** Nomenclature, Properties and classification of enzymes, Mechanism of Enzyme action, regulation of enzyme action, isoenzymes.
- Unit III. Photosynthesis:** Light and dark reactions, pigments and mechanism of light absorption, Photosystem I and II, Emerson enhancement effect, C₃, C₄ and CAM pathways, significance of C₄ and CAM pathways, photorespiration, Photo synthetic productivity.
- Unit IV. Respiration:** Glycolysis, TCA cycle and its role in synthesis of bio-molecules Mitochondrial electron transport, oxidative phosphorylation, Pentose phosphate pathway, cyanide resistance, Bioenergetics principles.
- Unit V. Nitrogen Metabolism:** Nitrification and denitrification, Nitrate assimilation, Biological nitrogen fixation, Biosynthesis of amino acids - reductive amination and trans amination, Protein synthesis, classification of amino acids and proteins, amphoteric nature and zwitter ions, structure of proteins, protein denaturation, Isolation and purification of proteins.
- Unit VI. Lipid Metabolism:** Fatty acids, lipids, triglycerides, Saponification, oxidation of Fatty acids - alpha and beta oxidation.
- Unit VII. Plant Growth:** Growth curve, growth analysis, Plant Growth Regulating substance (PGRS), Gibberellins, Cytokines, Abscisic acid, Ethylene, role of PGRS in agriculture.
- Unit VIII. Plant Development:** Physiology of flowering, Phytochrome, flowers induction, Seed germination and dormancy, senescence and aging, stress physiology, vernalization and abscission.

Practicals Based On BOT- 409

1. Separation of chlorophyll pigments by paper and thin layer chromatography,
2. Spectrophotometry - Absorption spectrum for chlorophyll pigments extracted from green leaves.
3. Estimation of total chlorophyll, chlorophyll 'a' and chlorophyll b
4. Estimation of reducing sugars using Fehling's solution A and B.
5. Isolation of starch from potato.
6. Isolation of pectin from fruit rinds.
7. Hydrolysis of starch by acid and crude enzyme extract from germinating seeds.
7. Effect of temperature on permeability.
8. Difference between C₃ and C₄ plants- chlorophyll content and leaf anatomy.
9. Estimation of Ascorbic acid from fruit juice and germinating seeds.
10. Estimation of proline in normal plant and that under stress.
11. Separation of amino acids by paper and thin layer chromatography.
12. Chemical tests for protein.
13. Estimation of protein by Lawry's method.
14. Estimation of protein by Biuret method.
15. Isoelectric point of casein.
16. Immobilization of enzymes using sodium alginate.
17. Preparation of leaf protein concentrate (LPC) by heat coagulation method.
18. Iodine number of fat.
19. Saponification number of fat.
20. Growth analysis - RGR, NAR and LAI.
21. Biostatistics: mode, median, mean, range, mean deviation, standard deviation, coefficient of variation (C.V.) in simple or classified data (frequency distribution).

16. Laboratory Manual in Biochemistry, Jayraman, J., New Age International Publishers, Mumbai.
17. Experiment in Plant Physiology, D. Bajrachrys Narosa Publishing House, New Delhi.

BOT 410
Research Methodology - I

Unit I.: Microscopy: Light Microscopy, Phase contrast Microscopy, SEM & TEM, The flow cytometry and confocal microscopy in karyotype analysis.

Unit II.: Stains and Staining Procedures: Preparation and use of various stains used in Botany- Saffranine, Crystle Violet, Light Green, Erythrosine, Acetocarmine, Fuelgen, Basic Fuschin, Cotton Blue, Iodine, Sudan IV, Fluoroglucinol, Carbolic acid etc. Sectioning and Maceration, Microtomy and its staining.

Unit III.: Ethical and Legal issues of Research: Authentication of specimens, Legal permissions for collection of biological material from Local Biodiversity committees, Forest Department, State Biodiversity Board and National Biodiversity Authority.

Unit IV.: Plant Collection and Preservation — Plant collection, Voucher specimens, Herbarium techniques, Liquid preservation etc. **Sampling of Plant materials** for Phytochemistry, DNA finger printing, Tissue Culture, Cytological, pathological studies etc.

Unit IV.: Biostatistics: i) Biostatistics used in analysis of data - mean, variance, standard deviation, standard error, coefficient of variation and 't' test, lay out of field experiments.

Unit V.: Laboratory Techniques: Ultracentrifugation, TLC, fractionation, Biochemical analysis, Electrophoresis, PCR, GISH, FISH techniques. Tissue culture technique, Spectroscopy,

Suggested Readings :
